Graduate Degree Program
College: Computer, Mathematical, and Natural Sciences

Abstract
The Department of Astronomy offers programs of study leading to the Master of Science and Doctor of Philosophy degrees. A full schedule of courses covering most fields of astronomy is offered. Some areas in which the faculty focus their research efforts are comets, interplanetary dust, planetary dynamics, extrasolar planets, star and planet formation, mm wavelength astronomy, the interstellar medium, black holes, active galaxies, time-domain astronomy, galaxy formation and evolution, plasma astrophysics, high energy astrophysics, theoretical and computational astrophysics, and cosmology.

Financial Assistance
The Department of Astronomy offers both teaching and research assistantships. Essentially all full-time graduate students receive full financial support. Most students receive research assistantships to cover the summer period. These are either with faculty in the Department or with staff members at the NASA/Goddard Space Flight Center. Some summer teaching assistantships are also available.

Fax: 301.314.9067
Email: astr-grad@deans.umd.edu
Website: http://www.astro.umd.edu

Courses: ASTR
Relationships: Physics (PHYS)

Admissions
General Requirements
• Statement of Purpose
• Transcript(s)
• TOEFL/JIELTS/PTE (international graduate students)

Program-Specific Requirements
• Letters of Recommendation (3)
• Graduate Record Examination (GRE): Please contact astr-grad@deans.umd.edu to discuss exceptions. (The University of Maryland’s institution code is 5814.)

Facilities and Special Resources
The Department has guaranteed observing time on the new 4.3-meter Discovery Channel Telescope through a partnership with Lowell
Observatory. We have strong interactions with other major observatories, where many students and faculty maintain observing programs, and with neighboring scientific institutes, including the Naval Observatory, the Naval Research Lab, and other government agencies. We have joined with Caltech and other partners in the Zwicky Transient Facility, a time-domain survey for studying rare and exotic transient phenomena which will see first light at Palomar Observatory in 2017. Our planetary science team is heavily involved with space missions visiting solar system bodies, such as NASA’s Deep Impact, EPOXI, and Rosetta missions to study comets.

The Center for Research and Exploration in Space Science & Technology (CRESST) is the most visible of our many interactions with NASA’s Goddard Space Flight Center, located only 5 miles away. UMD researchers work together with Goddard scientists on many topics, ranging from the study of neutron stars, black holes, and extremely hot gas throughout the universe to the study of planets in our Solar System. This partnership offers an exciting array of opportunities for graduate students to work with Goddard scientists and facilities on their Ph.D. theses.

In 2010, U. Maryland and NASA’s Goddard Space Flight Center signed an agreement launching the Joint Space-Science Institute (JSI), a close collaboration between the Departments of Astronomy and Physics and NASA/Goddard. JSI’s areas of investigation include black hole physics, high-energy astrophysics, and cosmology.

The Department has also established a partnership with Pontificia Universidad Catolica de Chile (PUC). PUC, one of the top two institutions for astronomy in Chile, signed an agreement with UMD in 2010 that enables astronomy graduate students at both institutions to participate in a joint Ph.D. program starting in their third year. These students split their time between both locations and conduct their thesis research under the supervision of UMD and PUC co-advisors. UMD students gain improved access to Chilean observatories, which include many of the best telescopes in the world.

The Center for Theory and Computation (CTC), a strong group of theoretical astrophysicists within the department, built and maintains a Beowulf cluster to perform computational analyses and simulations across a range of research areas. We also have access to three larger university clusters, including the world-class "DeepThought2" and "MARCC/Bluecrab", which have been invaluable to our students in completing computationally-intensive thesis projects.

In 2014, much of the Department moved to the new Physical Sciences Complex (PSC). Highlights of the building include beautiful architecture, windowed office space for grad students, a grad student lounge, and a state-of-the-art visualization lab for state-of-the-art simulations and displays of large datasets.

This Department is associated with the following research units and facilities:

- Center for Research and Exploration in Space Science and Technology (CRESST) (http://cresst.umd.edu): Partnership between UMCP, UMBC, USRA, and NASA/Goddard, with an emphasis on high-energy astrophysics.
- Laboratory for Millimeter Wave Astronomy (LMA) (http://www.astro.umd.edu/rareas/lma)
