

HEALTH SERVICES RESEARCH (PHHS)

Graduate Degree Program
College: Public Health

Abstract

The doctoral program in Health Services Research provides interdisciplinary training in research and policy analysis relevant to the planning, administration, management, and evaluation of health and health care programs. The degree will prepare students to advance research, policy, and practice change that improves access, cost, and quality in the health care sector. The program requires 53-56 credits, depending on whether the student enters with an MPH degree. Students take 9 required courses that cover theory and methods relevant to the field, a 1 credit research ethics course, and a 1 credit applied statistical programming course. Students without an MPH take a foundational public health course. Together with their advisor, students select 4 elective courses that allow for specialization. The area of specialization is specific to the student but might include health economics, policy analysis, health equity, or outcomes research. After completing the coursework, students must pass a qualifying exam and then a dissertation proposal defense. After the dissertation proposal defense, students enter candidacy and take dissertation credits, which culminate in a doctoral dissertation and an oral dissertation defense.
