ASTR - ASTRONOMY

ASTR100 Introduction to Astronomy (3 Credits)
An elementary course in descriptive astronomy, especially appropriate for
non-science students. Topics include the Sun, Moon, planets, stars, and
nebulae, galaxies, and evolution of the Universe.
Credit Only Granted for: ASTR100, ASTR101, or ASTR120.

ASTR101 General Astronomy (4 Credits)
Descriptive astronomy, appropriate for non-science majors. Sun, moon,
planets, stars, nebulae, galaxies and evolution. Laboratory exercises
include use of photographic material, computer simulations, and
standard laboratory equipment.
Credit Only Granted for: ASTR100, ASTR101, or ASTR120.

ASTR120 Introductory Astrophysics - Solar System (3 Credits)
For students majoring in astronomy or with a strong interest in
science. Topics include development of astronomy, planetary orbits,
electromagnetic radiation, telescopes as well as constituents and origin
of the solar system (planets, satellites, comets, asteroids, meteoroids,
etc.).
Prerequisite: Must have completed or be concurrently enrolled in
MATH140.
Restriction: Must not have completed ASTR101 or ASTR100.
Credit Only Granted for: ASTR100, ASTR101, or ASTR120.

ASTR121 Introductory Astrophysics II - Stars and Beyond (4 Credits)
For students majoring in astronomy or with a strong interest in science.
Includes instrumentation, stellar properties, stellar evolution, structure
of the galaxy, other galaxies, large scale structure, Big Bang Theory, and
future of the universe.
Prerequisite: ASTR120 or MATH140; or permission of CMNS-Astronomy
department.
Restriction: Must be in Astronomy program; or permission of CMNS-
Astronomy department.

ASTR220 Collisions in Space - The Threat of Asteroid Impacts (3 Credits)
Should we defend our planet against potential asteroid impacts?
Collisions in Space will evaluate the threat of asteroid impacts with the
Earth using knowledge of asteroid characteristics and orbits. The merits
of possible defense plans will be discussed, as well as the political and
and forbidden lines); radiation processes (line radiation, opacity).
Prerequisite: ASTR121 and MATH140; or completion of the CORE
Distributive Studies requirement in Mathematics and Sciences or
General Education Fundamental Studies requirement in Mathematics. Or
permission of CMNS-Astronomy department.
Restriction: Must not be in the Astronomy major.

ASTR230 The Science and Fiction of Planetary Systems (3 Credits)
Have you ever wondered if humans will ever terraform Mars or Europa so
we could live there without a spacesuit? Has it ever crossed your mind
how lucky you are that you live on a water-rich planet with an oxygen-
rich atmosphere? Have you ever suspected novelists and scriptwriters
of creating ridiculous planets that violate scientific laws? Does the fate
of our planet’s thin biosphere keep you up at night? How common is
life in the Universe? These are difficult questions, but armed with the
right information, you can answer all of them. The Science and Fiction
of Planetary Systems will help you develop a deeper understanding of
why planets are the way they are. Along the way, you'll see examples of
mistakes made in classic science fiction movies, novels and short stories
and get the chance to invent your own plausible planets!
Prerequisite: Must have math eligibility of MATH115 or higher; or
MATH113.

ASTR288 Special Projects in Astronomy (1-3 Credits)
Independent study, short research projects, tutorial reading, and assisting
with faculty research and teaching under special supervision.
Prerequisite: Permission of CMNS-Astronomy department.
Repeatable to: 6 credits.

ASTR300 Stars and Stellar Systems (3 Credits)
Designed primarily for non-science majors. Study of stars-types,
properties, evolution, and distribution in space; supernovae, pulsars, and
black holes.
Prerequisite: ASTR100 or ASTR101; and completion of the CORE
Distributive Studies requirement in Mathematics and Sciences or
General Education Fundamental Studies requirement in Mathematics. Or
permission of CMNS-Astronomy department.

ASTR310 Observational Astronomy (4 Credits)
Introduction to current optical observational techniques, with brief
coverage of infrared, ultraviolet, and x-ray techniques. Statistics, spherical
trigonometry time, catalogs, geometrical and physical optics, telescopes,
and optical instruments. Effects of the atmosphere. Practical work at the
observatory using a CCD camera. Some nighttime observing sessions.
Prerequisite: ASTR121; or PHYS171 or PHYS161. Or permission of
CMNS-Astronomy department.
Restriction: Must be in Astronomy program.

ASTR315 Astronomy in Practice (4 Credits)
Students learn astronomy research techniques and contribute
significantly to the existing body of astronomical knowledge. Students
apply methods and tools such as celestial coordinates, telescopes and
CCD cameras, and appropriate analysis software to a specific
observational goal. Students produce a work detailing their scientific
result which will be submitted for publication in a professional venue.
Each semester, the course focuses on a specific astronomical topic or
type of object, such as asteroids, extrasolar planets, supernovae in other
galaxies, quasars, etc.
Prerequisite: Must not be in Astronomy program.
Restriction: Must not be in Astronomy program.

ASTR320 Theoretical Astrophysics (3 Credits)
Application of selected physics concepts in an astrophysical context.
Topics would include gravity (Keplerian motion, Virial theorem, Roche
limit, dynamical friction); gas dynamics (hydrostatic equilibrium, stellar
models, spiral density waves), thermodynamics and statistical physics
(Boltzmann distribution, Wien displacement, convective instability,
degenerate gas); atomic physics (quantum principles, H atom, permitted
and forbidden lines); radiation processes (line radiation, opacity).
Prerequisite: ASTR121; and PHYS270 and PHYS271; or PHYS273.
Restriction: Must be in Astronomy program.

ASTR322 Collisions in Space - The Threat of Asteroid Impacts (3 Credits)
Application of selected physics concepts in an astrophysical context.
Topics would include gravity (Keplerian motion, Virial theorem, Roche
limit, dynamical friction); gas dynamics (hydrostatic equilibrium, stellar
models, spiral density waves), thermodynamics and statistical physics
(Boltzmann distribution, Wien displacement, convective instability,
degenerate gas); atomic physics (quantum principles, H atom, permitted
and forbidden lines); radiation processes (line radiation, opacity).
Prerequisite: ASTR121; and PHYS270 and PHYS271; or PHYS273.
Restriction: Must be in Astronomy program.

ASTR330 Solar System Astronomy (3 Credits)
Designed primarily for non-science majors. The structure of planets and
of their atmospheres, the nature of comets, asteroids, and satellites.
Comparison of various theories for the origin of the solar system.
Emphasis on a description of recent data and interpretation.
Prerequisite: ASTR100 or ASTR101; and completion of the CORE
Distributive Studies requirement in Mathematics and Sciences or the
General Education Fundamental Studies requirement in Mathematics. Or
permission of CMNS-Astronomy department.
Credit Only Granted for: ASTR330 or GEOL212.
ASTR340 Origin of the Universe (3 Credits)
Designed primarily for non-science majors. A study of our progression of knowledge about the universe. Topics include: early cosmological models, geocentric vs. heliocentric theory, curvature of space, Hubble’s Law, Big Bang Theory, microwave background radiation, evolution of stars and galaxies, dark matter, active galaxies, quasars and the future of the universe.
**Prerequisite:** ASTR100 or ASTR101; and completion of the CORE Distributive Studies requirement in Mathematics and Sciences or General Education Fundamental Studies requirement in Mathematics. Or permission of CMNS-Astronomy department.

ASTR350 Black Holes (3 Credits)
Black holes are the most exotic prediction of Einstein’s Theory of General Relativity and, amazingly, the Universe seems to manufacture these bizarre objects in copious numbers. As well as being the ultimate laboratory for studying the nature of space and time, they drive some of the most energetic and extreme phenomena known to astronomers (with quasars and gamma-ray bursts being just a couple of examples). In this introduction to the physics and astrophysics of black holes, we start by examining the basic physics of black holes, which fundamentally means understanding gravity. We then look at the nature of stellar-mass black holes and supermassive black holes. We will discuss the fairly recent realization that black holes may be crucial agents for regulating the growth of galaxies. Finally, we dive into the realm of theoretical physics and probe how black holes may provide a route for uncovering new laws of physics governing the structure of space and time.
**Prerequisite:** ASTR100 or ASTR101; and completion of the CORE Distributive Studies requirement in Mathematics and Sciences or General Education Fundamental Studies requirement in Mathematics. Or permission of CMNS-Astronomy department.
**Credit Only Granted for:** ASTR398B or ASTR350.
**Formerly:** ASTR398B.

ASTR380 Life in the Universe - Astrobiology (3 Credits)
Designed primarily for non-science majors. Study of the astronomical perspective on the conditions for the origin and existence of life in the universe.

ASTR386 Experiential Learning (1-3 Credits)
**Restriction:** Junior standing or higher; and permission of CMNS-Astronomy department.

ASTR398 Special Topics in Astronomy (3 Credits)
This course is designed primarily for students not majoring in astronomy and is suitable for non-science students. It will concentrate study in some limited field in astronomy which will vary from semester to semester. Possible subjects for study are the solar system, extragalactic astronomy and cosmology, the inconstant universe.
**Restriction:** Junior standing or higher; or permission of CMNS-Astronomy department.
**Repeatable to:** 6 credits if content differs.

ASTR399 Honors Seminar (1-16 Credits)
Credit according to work done.
**Restriction:** Must be admitted to the departmental honors program in astronomy.

ASTR406 Stellar Structure and Evolution (3 Credits)
Study of stellar internal structure, nuclear reactions, and energy transport. Study of stellar evolution of both low-mass and high-mass stars, including the stellar end states of white dwarfs, neutron stars, and black holes.
**Prerequisite:** ASTR320; or permission of CMNS-Astronomy department.
**Credit Only Granted for:** ASTR498N or ASTR406.
**Formerly:** ASTR498N.

ASTR410 Radio Astronomy (3 Credits)
Introduction to current observational techniques in radio astronomy. The radio sky, radiophysics, coordinates and catalogs, antenna theory, Fourier transforms, interferometry and arrays, aperture synthesis, and radio detectors.
**Prerequisite:** ASTR121; and (PHYS271 and PHYS270; or PHYS273). Or permission of CMNS-Astronomy department.

ASTR415 Computational Astrophysics (3 Credits)
Introduction to the most important computational techniques being used in research in astrophysics. Topics include modern high performance computer architectures, scientific visualization and data analysis, and detailed descriptions of numerical algorithms for the solution to a wide range of mathematical systems important in astrophysics.
**Prerequisite:** ASTR121; and (PHYS271 and PHYS270; or PHYS273). Or permission of CMNS-Astronomy department. Jointly offered with ASTR615.
**Credit Only Granted for:** ASTR415 or ASTR615.

ASTR421 Galaxies (3 Credits)
Introduction to structure, kinematics, and dynamics of normal and peculiar galaxies. Quantitative descriptions of normal spiral galaxies (like our Milky Way) and elliptical galaxies will be followed by more exotic considerations such as interacting and merging galaxies, and active galactic nuclei.
**Prerequisite:** ASTR121; and (PHYS271 and PHYS270; or PHYS273). Or permission of CMNS-Astronomy department.

ASTR422 Cosmology (3 Credits)
Introduction to modern cosmology. Topics include large scale structure of universe, the intergalactic medium, the nature of dark matter cosmological models and galaxy formation.
**Prerequisite:** Must have completed or be concurrently enrolled in ASTR320; or permission of CMNS-Astronomy department.

ASTR430 The Solar System (3 Credits)
**Prerequisite:** ASTR121; and (PHYS271 and PHYS270; or PHYS273). Or permission of CMNS-Astronomy department.

ASTR435 Astrophysics of Exoplanets (3 Credits)
Introduction to exoplanets. Topics include historical development, advantages, and limitations of detection methods, the statistics of exoplanet characteristics, the bulk properties of known exoplanets, and remote sensing for characterization of exoplanets.
**Prerequisite:** ASTR121; and (PHYS273; or (PHYS270 and PHYS271)). Or permission of CMNS-Astronomy department.
**Credit Only Granted for:** ASTR498X or ASTR435.
**Formerly:** ASTR498X.
ASTR450 Orbital Dynamics (3 Credits)
Vectorial mechanics, motion in a central force field, gravitational and non-gravitational forces, the two-body and three-body problems, orbital elements and orbital perturbation theory, resonances in the solar system, chaos. Intended for students majoring in any of the physical sciences.
Prerequisite: Must have completed or be concurrently enrolled in ASTR320; or permission of CMNS-Astronomy department.

ASTR480 High Energy Astrophysics (3 Credits)
The structure, formation, and astrophysics of compact objects, such as white dwarfs, neutron stars, and black holes, are examined. Phenomena such as supernovae and high-energy particles are also covered.
Prerequisite: Must have completed or be concurrently enrolled in ASTR320; or permission of CMNS-Astronomy department.

ASTR498 Special Problems in Astronomy (1-6 Credits)
Research or special study. Credit according to work done.
Restriction: Must be in one of the following programs (Physics; Astronomy); and permission of CMNS-Astronomy department.
