ECONOMICS MAJOR

Economists study a wide range of phenomena using analytical methods which describe how people and collections of people behave and interact. Many economists define their profession as the analysis of decisions made in the context of scarcity. Economics can also be described as the study of the production, pricing, and distribution of goods and services within societies. Economists study such issues as inflation, unemployment, poverty, environmental quality, financial markets, and international trade. Economists also apply their methods of analysis to such diverse areas as crime, health care, discrimination, and the problems of developing countries.

Courses offered by this department may be found under the following acronym: ECON. As a large, diverse department, courses are offered in many of the major fields of economic study. Several courses analyze the role of the government policies impacting economic outcomes, while others focus on developing advanced applications of economic theories and methodologies.

Students can learn about the methods of analysis that economists use and about the various fields of inquiry where economists have been most productive. Undergraduate economics majors choose between two curriculums, one leading to a Bachelor of Arts degree and the other to a Bachelor of Science. In the BA track, students learn how to apply economic analysis to a variety of social issues, as well as, the fundamental methodological tools. In the BS track, students focus more attention on the methodology of economic analysis, which requires more emphasis on quantitative skills.

Economics majors have a wide variety of career options, including positions in state and local government, federal and international agencies, business, finance and banking, journalism, teaching, politics and law. Many economics majors pursue graduate work in economics or another social science, law, business or public policy.

Program Learning Outcomes

Students are expected to fully utilize the opportunities presented for learning and research. Having completed the degree program, students should have acquired the following knowledge and skills:

1. Understanding of the key terminology used within the discipline.
2. Ability to use the fundamental methods and tools of the discipline to model economic behavior and to describe and analyze relationships between economic variables.
3. Ability to interpret and apply descriptive and inferential statistics.
4. Ability to analyze the effect of government policies on the economy using both conceptual and quantitative tools.
5. BA track: Ability to articulate how economic analysis can be used to improve decision-making in various situations.
6. BS track: Ability to carry out various techniques for evaluating hypotheses regarding economic phenomena.

Requirements

In addition to the university’s general education requirements, students must earn a minimum of 39 credits via a combination of foundation and elective courses in Economics and Math as listed below. Both the Bachelor of Arts and the Bachelor of Science tracks require a sequence of courses starting with introductory micro and macroeconomics, as well as, calculus. Students then proceed to intermediate level courses in theory and statistics. Finally, students take at least one upper-level course focused on quantitative analysis plus several upper-level courses where you explore specific topics in more depth. Both tracks require the same number of courses.

All courses must be passed with a grade of ‘C’ or better to count towards the foundation and elective requirements. Students must have a minimum 2.0 cumulative grade point average across all courses used to satisfy major degree requirements. A course used to fulfill one requirement for the major may not count towards any other economics major requirement.

ECON423 Econometrics II 3
ECON406 Advanced Microeconomics 3
or ECON407 Advanced Macroeconomics

Economics Electives Courses
Select three 400 level ECON courses designated for the BS 9

Total Credits 41

The Economics curriculum may be updated over time, given college and campus approval. Students will be notified as other appropriate courses are approved that fulfill the requirements for the major.

Other Requirements for the Major

Study Sequences and Plans of Study
Those students planning to pursue graduate study in economics must begin to prepare themselves analytically for graduate work by focusing on theory, statistics, and mathematics in their undergraduate curriculum. These students should consider the full econometrics sequence of ECON422 and ECON423. Mastery of advanced calculus and linear algebra is essential for entrance into graduate schools, and therefore students must take MATH140, MATH141, MATH240, MATH241 and MATH246. Students should also plan on taking MATH410 and MATH411.

Benchmarks
In accordance with the University’s policies, the Department of Economics expects students to make timely progress towards graduation. To help measure progress during the early stages of a student’s studies in economics, students will have to complete courses designated as benchmarks within a specified number of semesters in order to continue in their major.

Bachelor of Arts
Students must complete the following five courses within two semesters of entering the major:

- ECON200, ECON201, and MATH120 or MATH140 with grades of C- or higher
- One additional GenEd course with a D- or higher
- Academic Writing with a C- or higher

Bachelor of Science
Students must complete the following six courses within two semesters of entering the major:

- ECON200, ECON201, MATH140, and MATH141 with grades of C- or higher
- One additional GenEd course with a D- or higher
- Academic Writing with a C- or higher

These benchmark deadlines may not be appropriate for all incoming students (depending upon credit earned prior to entering the major and math placement). All students complete an individualized benchmark contract with an ECON advisor, either at orientation or in the process of declaring the major. Freshmen wishing to declare an Economics major should see an advisor as soon as possible in order to set appropriate benchmarks and establish a coherent graduation plan.

Four Year Plan
