Upon completion of the proposed curriculum, students will:

1. Have the knowledge needed to construct a new survey questionnaire or evaluate an existing survey questionnaire in accord with the basic principles of questionnaire design;
2. Know how to identify potential sources of error in survey estimates and suggest strategies for minimizing those errors; and
3. Be aware of various features of the design of sample surveys that may affect the analysis and interpretation of the resulting data.

Requirements

16-19 credits are required for the minor as outlined below:

**Course** | **Title** | **Credits**
--- | --- | ---
**Select one of the following:** | | 3-4
BIOM301 | Introduction to Biometrics | 
CCJS200 | Statistics for Criminology and Criminal Justice | 
ECON230 | Applied Economic Statistics | 
ECON321 | Economic Statistics | 
EDMS451 | Introduction to Educational Statistics | 
GVPT422 | Quantitative Political Analysis | 
PSYC200 | Statistical Methods in Psychology | 
SOCY201 | Introductory Statistics for Sociologists | 
STAT400 | Applied Probability and Statistics I | 
STAT410 | Introduction to Probability Theory | 
**Select one of the following:** | | 3-4
AREC422 | Econometric Analysis in Agricultural and Environmental Economics | 
ECON422 | Econometrics I | 
ECON424 | Applied Econometrics | 
SOCY401 | Intermediate Statistics for Sociologists | 
STAT401 | Applied Probability and Statistics II | 
PSYC300 | Research Methods in Psychology Laboratory | 
STAT420 | Theory and Methods of Statistics | 
**Core Course in Survey Methodology (6 credits)**
SURV400 | Fundamentals of Survey and Data Science | 3
SURV630 | Questionnaire Design and Evaluation | 3
**Additional Survey Methodology Courses (4-5 credits)**
Select one of the following: | | 3
SURV621 | Fundamentals of Data Collection | 
SURV632 | Cognition, Communication and Survey Measurement (Fall) | 
SURV625 | Applied Sampling (Spring, Summer) | 
Any 600 Level 1 or 2 credit Introductory SURV course | 1-2
**Total Credits** | | 16-19

---

1 Please refer to the 'Statistics and Research Methods Courses' section below for additional information.
2 Additional information about this course can be found in the 'Core Course in Survey Methodology' section below.
3 Please refer to the 'Additional Survey Methodology Courses' section below for additional information.

Statistics and Research Methods Courses (6-8 credits)

The design of survey samples and the analysis of survey data are inherently quantitative exercises. It is, therefore, important that anyone seeking to work in these fields of endeavor have a solid quantitative background. Students enrolled in the minor will be required to take two courses in statistics and research methods.
There is enormous demand on campus for many of the courses listed as options for fulfilling the statistics/research methods requirement, especially the courses on the first list, and the number of seats available in these classes may be limited. Majors in the department that offers a course may receive priority for enrollment (e.g., CCJS200) or enrollment in a course may be restricted to majors (e.g., ECON321). In addition, there may be prerequisites associated with a particular course. Several of the courses listed in the first set of options require that the student have taken calculus and some of the courses listed in the second set of options require a particular first course as a prerequisite (e.g., STAT420 requires STAT410 as a prerequisite). The fact that a course is listed as an appropriate option for fulfilling the minor requirements does not imply that students necessarily will be able to enroll in that specific course. Students interested in the minor will be asked to consult with their JPSM Advisor about the best way to complete the two course statistics and research methods requirement given their individual circumstances. Courses covering similar material, including courses offered at other institutions, may be accepted as substitutes for the listed courses.

SOCY201 and SOCY401 are 4-credit rather than 3-credit courses. For students choosing these courses to fulfill the requirements of the minor, the minor will be an 18 to 19 credit program. Students admitted to the minor in the spring of their sophomore year who have not yet taken one of the listed statistics/research methods courses ideally will take one in the fall of their junior year and the second in the spring of their junior year.

**Core Courses in Survey Methodology (6 credits)**

The core course of the minor is SURV400 Fundamentals of Survey Design. This is an existing course that is offered each spring and is taught by a regular member of the JPSM teaching faculty. Students in the minor will be given enrollment priority. SURV400 is designed to provide students with an overview of the entire survey process, from the development of survey objectives to the collection and analysis of the survey data. The textbook for the course was authored by leading scholars in the field, all of whom have taught in the JPSM program. SURV400 will be a prerequisite for the two additional 3 credit SURV courses required for the minor and should be taken in the spring of the junior year. Students completing the minor also will be required to take SURV630 Questionnaire Design, an existing course taken by students pursuing the JPSM Masters in Survey Methodology, in the spring. Successful completion of SURV630 will satisfy the minor requirement. Taking SURV630 could be advantageous for students who later apply for the JPSM Masters degree program, as it is a required course for that program.

**Additional Survey Methodology Courses (4-5 credits)**

Students taking the minor also will be required to take an additional three-credit 600-level SURV course from the list below. The course options and the semesters when these courses are regularly offered are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>SURV621</td>
<td>Fundamentals of Data Collection I</td>
<td>3</td>
</tr>
<tr>
<td>SURV632</td>
<td>Cognition, Communication and Survey Measurement (Fall)</td>
<td>3</td>
</tr>
<tr>
<td>SURV625</td>
<td>Applied Sampling (Spring, Summer)</td>
<td>3</td>
</tr>
</tbody>
</table>

These are existing courses taken primarily by students in the JPSM Masters program. Although these are graduate level courses, we believe they should be accessible to advanced undergraduates with suitable preparation.

Students taking the minor also will be required to take one additional 1-2 credit introductory 600-level SURV course of their choosing. This includes onsite or online SURV courses.

**Completion Requirements**

In order to complete the minor, students must:

- Complete all 16-18 required credits;
- Achieve a minimum grade of ‘C’ or better in all minor courses;
- Students must have a minimum 2.0 cumulative grade point average across all courses used to satisfy the minor requirements;
- Apply no more than two courses from the minor to satisfying the requirements of the student’s major;
- Complete no more than two courses for the minor at an institution other than the University of Maryland, College Park.

The minor is designed to be completed during the junior and senior years, but students could apply for admission to the minor as early as the fall of their sophomore year. Courses completed prior to applying for the minor will be accepted to satisfy the minor requirements.

**Advising**

Interested students should contact JPSM at jpsm-contact@umd.edu. The application form will be posted to the JPSM website at https://jpsm.umd.edu/undergraduate/undergraduate-admissions/ and applications for admission will be reviewed each semester. Once admitted to the program, students will work with the program director or an assigned faculty advisor to plan the courses to be taken to complete the minor. Students will be expected to be in touch with their faculty advisor(s) prior to the start of each semester to ensure that they are continuing on track to complete the minor requirements.
