CHEMISTRY MAJOR

Program Director: Michael Montague-Smith, Ph.D.

The study of molecular and atomic properties and interactions that encompass Chemistry and Biochemistry are central to many scientific disciplines including biology, geology, astronomy, environmental science, materials science and numerous others.

The Department of Chemistry and Biochemistry offers two options for undergraduate degrees in chemistry.

The traditional Bachelor of Science (BS) option provides in-depth instruction in quantitative methods and experimental design. This plan can be used to obtain an American Chemical Society (ACS) approved degree. The BS option is therefore strongly recommended for student who are seeking careers as practicing scientists or who intend to pursue graduate studies in Chemistry and related areas.

The Bachelor of Arts (BA) option provides sound, foundational instruction in all of the sub-disciplines of Chemistry including analytical, inorganic, organic, and physical chemistry as well as a biochemistry but it provides more flexibility in upper level coursework, allowing students to pursue interdisciplinary studies. The BA track is recommended for students who intend to (1) obtain K12 teaching certification, (2) double major, minor, or earn certificates in outside areas such as business, public policy, data science, or public health.

Chemistry and Biochemistry majors continue to graduate or professional school, and obtain employment as educators and technical scientists. Courses offered by this department may be found under the following acronyms: BCHM, CHEM

Admission to the Major

Chemistry and Biochemistry are part of a Limited Enrollment program (LEP) within the College of Computer, Mathematical, and Natural Sciences (CMNS). Current UMCP students who wish to declare in CHEM or BCHM must complete a series of gateway courses (CHEM146/CHEM177 (or CHEM131/CHEM132), CHEM237 (or CHEM231/CHEM232), and MATH140 and MATH141 (or MATH 135 and MATH 136 for BA major)) prior to applying to the program. Information is available at: http://lep.umd.edu.

Placement in Courses

The Department of Chemistry and Biochemistry rigorously enforces all of its prerequisites. Enrollment in CHEM131/CHEM132 or CHEM146/CHEM177 requires placement in calculus (MATH120 or MATH130 or MATH140).

Program Learning Outcomes

1. Students should demonstrate mastery of a body of knowledge represented by the curricula in Chemistry and Biochemistry. Students should have mastered the critical knowledge in each level in the curriculum that is necessary to move on to the next level in the curriculum.
2. The ability to read, evaluate and interpret chemical and numerical information for a novel problem using their foundational knowledge in science.
3. Students should have knowledge of appropriate safe-handling procedures and disposal of chemicals.
4. Students at lower level should demonstrate an ability to carry out key experimental techniques used in the chemical and life sciences disciplines.
5. Students at upper level should be able to design experiment to test specific hypotheses, carry out these experiments using appropriate instrumentation and analyze the results.
6. Students should demonstrate the ability to use the broader scientific literature to select appropriate information to support his/her work.
7. Students should effectively communicate, both verbally and in writing, the processes of science and the results of scientific inquiry using appropriate language and models of chemistry (i.e. equations, symbolism, etc).
8. Students should understand the importance of good ethical practices in scientific research.
9. Students should continue their career in science through gainful employment or entrance into a graduate or professional school.

REQUIREMENTS

Requirements for the Bachelor of Science in Chemistry (B.S.)

All required chemistry courses must be passed with a minimum grade of "C"-. Required supporting courses, including BSCI170&171, must be passed with a 2.0 grade point average.

Course | Title | Credits
--- | --- | ---
CHEM146 | Principles of General Chemistry | 5
& CHEM177 | and Introduction to Laboratory Practices and Research in the Chemical Sciences | 5
CHEM237 | Principles of Organic Chemistry I | 4
CHEM247 | Principles of Organic Chemistry II | 4
CHEM276 | General Chemistry and Energetics - Majors and Fundamentals of Analytical and Bioanalytical Chemistry Laboratory | 5
& CHEM277 | | 5

Supporting Courses

BSCI170 & BSCI171 | Principles of Molecular & Cellular Biology and Principles of Molecular & Cellular Biology Laboratory | 4
PHYS161 | General Physics: Mechanics and Particle Dynamics | 3
PHYS260 | General Physics: Vibration, Waves, Heat, Electricity and Magnetism and General Physics: Mechanics, Vibrations, Waves, Heat (Laboratory) | 4
MATH140 | Calculus I | 4
MATH141 | Calculus II | 4
MATH241 | Calculus III | 4

Required Upper-Level CHEM Courses

CHEM395 | Professional Issues in Chemistry and Biochemistry | 1
CHEM425 | Instrumental Methods of Analysis | 4
CHEM481 | Physical Chemistry I | 5
& CHEM483 | and Physical Chemistry Laboratory I | 1
CHEM401 | Inorganic Chemistry | 3
CHEM482 | Physical Chemistry II | 5
& CHEM484 | and Physical Chemistry Laboratory II | 5
In order to meet requirements for a degree approved by the American Chemical Society (ACS), students must complete a specific set of courses in addition to this curriculum. Information about ACS certification can be obtained in the undergraduate office.

**Requirements for the Bachelor of Arts in Chemistry (B.A.)**

All required chemistry courses must be passed with a minimum grade of "C-". Required supporting courses, must be passed with a 2.0 grade point average.
