Associate Dean for General Education: Douglas Roberts, Ph.D.

General Education at the University of Maryland
Through the General Education program you will discover that education at
the University of Maryland is an experience that reaches from
the campus classroom and lab to across the globe. As a student
you will engage with that larger universe by acquiring new skills and
understandings. General Education exposes you to different disciplines,
Improves your fundamental academic skills, and strengthens your
commitment to using knowledge and abilities to better yourself and
others.

The General Education program will assist you in preparing for a
new "multiverse" of learning, and for the demanding and constantly
changing world beyond graduation. It provides necessary skills and
basic knowledge, complements and expands the university's course
offerings, and connects you more fully to the intellectual community of
the Washington-Baltimore metropolitan area, the nation, and the world
beyond.

General Education Program Goals for All Students
- Develop the skills necessary to succeed in academic careers and in
  professional lives by establishing habits and understanding of clear
  writing, effective speaking and presentation, and critical and analytic
  reasoning.
- Strengthen knowledge in major areas of study.
- Broaden knowledge of civilizations past and present.
- Establish the ability to thrive both intellectually and materially and to
  support themselves, their families, and their communities through a
broad understanding of the world in which they live and work.
- Define the ethical imperatives necessary to create a just society in
  their own communities and in the larger world.

Important Notes: General Education Courses
- Must be selected from the courses coded as meeting General
  Education requirements. See list of approved General Education
  courses at Testudo (https://app.testudo.umd.edu/soc/gen-ed/). Click
  on the General Education list for the term you wish to explore.
- May also be used to satisfy college, major, and/or supporting area
  requirements
- May not be taken on a Pass-Fail basis.

For information about general education requirements prior to the
2012-2013 academic year please email gened@umd.edu.

REQUIREMENTS

Elements of the General Education Program
The General Education program is comprised of courses that build
foundational skills (Fundamental Studies (p. 1)), courses that expand
the breadth of your education (Distributive Studies (p. 2)) and
courses that explore and study human, societal and cultural differences
(Diversity (p. 2)). At least two of your Distributive Studies courses
will delve in to a "Big Question" as seen through the lens of a particular
academic discipline (I-Series (p. 2)).

Fundamental Studies
Master the skills.
The Fundamental Studies portion of the General Education program
consists of 5 courses (nominally 15 credits), with one course in each of
the following areas:
- Academic Writing (p. 1)
- Analytic Reasoning (p. 1)
- Mathematics (p. 1)
- Oral Communication (p. 1)
- Professional Writing (p. 1)

Academic Writing
The Academic Writing requirement prepares students with a foundational
understanding of the writing skills needed for success in further studies
at Maryland and beyond. All students must earn a grade of C- or better
in Academic Writing in order to meet this General Education requirement.

Analytic Reasoning
Courses in Analytic Reasoning foster a student's ability to use
mathematical or formal methods or structured protocols and patterns
of reasoning to examine problems or issues by evaluating evidence,
examining proofs, analyzing relationships between variables, developing
arguments, and drawing conclusions appropriately.

If a student successfully completes an Analytical Reasoning course that
requires a Fundamental Studies Mathematics course as a prerequisite,
then the Mathematics requirement will also be considered to be fulfilled.

Mathematics
The goal of the Mathematics requirement is to convey the power of
mathematics, demonstrated by the variety of problems that can be
modeled and solved by quantitative means. Ability in mathematics
is a critical measure of how well students are prepared to meet the
challenges they will face in their lives beyond school.

Oral Communication
Human relationships, from the most formal to the most personal, rest in
large measure on skilled listening and effective speaking. Skilful listening
and speaking support success in personal relationships, educational
undertakings, professional advancement, and civic engagement.

Professional Writing
The Professional Writing requirement strengthens writing skills and
prepares students for the range of writing expected of them after
graduation.
Distributive Studies
Experience a variety of disciplines.

A truly well-rounded education consists not only of courses within your major area of study, but also exposure to a wide variety of subjects and ways of thinking. The General Education program accomplishes this through its Distributive Studies courses. You will be able to follow your interests outside of your major, explore the many different opportunities available at the university, learn new skills and ways of study, and apply existing skills in new contexts. The Distributive Studies requirement consists of 8 courses (nominally 25 credits), with 2 courses in each of the following 4 areas:

- History and Social Sciences (p. 2)
- Humanities (p. 2)
- Natural Sciences (p. 2)
- Scholarship in Practice (p. 2)

History and Social Science
History and Social Science courses introduce students to history and to the social science disciplines, with their combination of qualitative and quantitative methods. They include courses in criminology, economics, history, psychology, sociology, and other social sciences.

Humanities
Humanities courses study the history and the genres of human creativity. They include courses in literatures in any language, art and art history, classics, and music and music history, as well as in the disciplines of linguistics and philosophy, among others.

Natural Sciences
Natural Science courses introduce the concepts and methods of studying the natural world. Courses include the traditional physical and life sciences, environmental science, animal and avian science, and plant science, among others. One of the two courses selected must include a substantial, rigorous laboratory experience.

Scholarship in Practice
Scholarship in Practice courses engage students in applying a body of knowledge to create professional products or works of art. Architecture, business, education, engineering, and journalism offer courses that lead to products such as architectural designs, new technologies, innovative publications, new computer software, business plans, advertising campaigns, educational curricula, and bioengineering. Creative and artistic performance courses lead students to produce writing portfolios, plays, operas, dance productions, art exhibits, and creative media. Scholarship in Practice also includes courses that combine competency in speaking, writing, and translation in a foreign language. One of the two Scholarship in Practice courses selected must be outside the student’s major requirements.

I-Series Courses
Explore “Big Questions” from a unique suite of courses that form the cornerstone of Distributive Studies.

The I-Series is the signature of General Education at the University of Maryland. I-Series courses are lively and contemporary. They speak to important issues that spark the imagination, demand intellect, and inspire innovation. They challenge students to wrestle with big questions, and examine the ways that different disciplines address them. I-Series courses are not surveys of particular fields of knowledge. Instead, I-Series courses provide students with the basic concepts, approaches, and vocabulary of particular disciplines and fields of study as well as an understanding of how experts in those disciplines and fields employ terms, concepts, and approaches. Two of the eight courses used to satisfy the Distributive Studies requirement must be I-Series courses.

Diversity
Explore human, social, and cultural differences.

The Diversity component of the General Education requirement consists of courses in the following two areas:

- Understanding Plural Societies (p. 2)
- Cultural Competence (p. 2)

Understanding Plural Societies
Life in a globally competitive society of the twenty-first century requires an ability to comprehend both theoretical and practical dimensions of human difference. From that perspective, Understanding Plural Societies is the centerpiece of the university’s Diversity requirement. Courses in this category speak to both the foundations—cultural, material, psychological, historical, social, and biological—of human difference and the operation or function of plural societies.

Cultural Competence
Cultural competence provides opportunities to gain an increased understanding of cultures and cultural practices, while learning to communicate effectively across cultural differences in a diverse society and world. This diversity category reflects a developmental, on-going process through which students learn about the lived experiences of individuals as members of socio-cultural groups and the complex interactions between groups. Cultural Competence courses emphasize acquisition of new knowledge, thoughtful consideration of issues of equity and justice, critical thinking, self-reflection, empathy, engaged global citizenship, and the development of skills necessary to work effectively with individuals, groups, and teams from diverse identities and perspectives.

To fulfill the Diversity requirement, students must complete:

- Two Understanding Plural Societies courses
- One Understanding Plural Societies course and one Cultural Competence course

Courses fulfilling the Diversity requirement may double-count in an approved Distributive Studies category.

More Information
To view the General Education Requirement Checklist and other resources, see: http://gened.umd.edu/students/student-resources/.

1 These course must be attempted by 30 credits and successfully completed by 60 credits.
